Summary

Results-driven **SDE** specializing in building scalable **ERP systems across the end-to-end supply chain**, spanning order flows, finance, procurement, supplier operations, and onboarding workflows. Experienced in architecting automation, reconciliation engines, and multi-party integrations for high-volume business workflows processing **200Cr+ monthly transactions system-wide**.

Professional Experience

FarMart Gurgaon, Haryana
SDE-2 *Oct 2025 – Present*

- **Reconciliation:** Engineered a **rule-based reconciliation engine** for payment narration mapping and automated advisory document processing, significantly improving invoice matching accuracy.
- **Supplier Payables:** Architected a high-volume **Zoho Books sync pipeline**, handling **18,000+ monthly records** across Bills, Payments, and Deductions.
- **Data Integrity:** Implemented **distributed locking via Redis** to eliminate race conditions causing duplicate Purchase Order (PO) creation, reducing duplicate transaction incidents by **95%**.
- **Onboarding:** Built a rule-driven **KYC and onboarding system** integrating Cashfree and Ongrid, onboarding **3,500+ contacts** with approximately **75% auto-approved without manual intervention**.
- **Operational Impact:** Delivered critical high-priority modules under compressed timelines, implementing a validation layer that reduced production bugs by **60%** and stabilized payment workflows.
- **Road Mapping:** Contributed to the **FY 2026 Technology Roadmap**, defining pod structures and technical milestones to improve execution efficiency.
- **Observability:** Built high-reliability status-tracking dashboards and retry mechanisms, improving external API reliability and reducing debugging time through enhanced visibility.

FarMart Gurgaon, Haryana
SDE-1 *Nov 2023 – Sep 2025*

- **Backend Performance:** Orchestrated a migration of legacy background jobs to Go-based services, leveraging concurrency primitives to achieve a **2.5x increase in execution speed**.
- **Supplier Payables:** Developed an **API-driven payable pipeline**, automating complex deduction and TDS accounting adjustments and improving finance processing throughput by **40%**.
- **Scalability:** Optimized database performance through targeted **query indexing and bulk I/O refactoring**, reducing average API response latency from **450ms to 300ms (30% improvement)** for critical workflows.
- **Workflow Automation:** Developed cron-based advisory mapping and reconciliation visibility tools, providing real-time prioritization and queue management for finance operations.
- **Document Standardization:** Automated generation of GST, TDS, and Debit Note documents, ensuring compliance and reducing manual correction cycles by **30%**.
- **API Reliability:** Built and maintained integrations for external payment status APIs, implementing circuit breakers and retry logic to handle third-party downtime.
- **System Robustness:** Handled complex edge cases across PO and Bill lifecycle flows, implementing defensive coding patterns that reduced production failure scenarios in dispatch modules.

Basys.ai Remote
Software Developer Intern *Apr 2023 – Jun 2023*

- **AI Integration:** Developed a promotional content generation engine utilizing OpenAI GPT-4 and News API, enabling automated marketing workflows.
- **UI Development:** Built a library of reusable React components and integrated Node.js backend services for data-driven internal visualization tools.

Technical Skills

Languages: JavaScript, Python, Go
Backend: Node.js, Express.js, REST APIs, Sequelize ORM
Frontend: React.js, Redux, Tailwind CSS
Databases: MySQL, PostgreSQL, MongoDB, Redis
Systems: Concurrency, Webhooks, API Integrations, Distributed Systems
Cloud & Tools: AWS (S3, SNS, SQS), Docker, PM2, Git, Jest, Mocha

Education

Netaji Subhas University of Technology (NSUT) New Delhi, India
B.Tech (CGPA: 8.53/10) *2019 – 2023*
